PROJECTS

COCKTAIL COMPANION

React

A React based app that helps users find the perfect drink. Users can decide if they wish to randomly generate cocktails or shots at the click of a button. Upon each click, a randomised drink will appear, complete with an image, ingredients list and instructions on how to make it yourself. Data is gathered using the Cocktail Database API.

MAKEUP YOUR MIND

jQuery | Sass

-An app that uses jQuery that helps users find new and exciting makeup products. Users can select what types of products they're looking for (i.e blush, bronzer, etc.) and filter out products with specific requirements (i.e Canadian made products). The products that match the users specifications are printed to the page with the product name and brand, an image and a link to buy the item. Data is gathered using the Makeup API.

ACADEMIC HISTORY

JUNO COLLEGE OF TECHNOLOGY

Immersive Web Development Bootcamp | April 2021 - June 2021

Accelerated JavaScript | February 2021

Accelerated Web Development 101 | January 2021
